EDUCATION

University of Wisconsin–Madison
Madison, WI | Expected May 2027
B.S. Data Science, Minor in Business — GPA: 3.84/4.0
Dean's List: Fall 2023, Spring 2024, Fall 2024, Spring 2025, Fall 2025, Spring 2026

TECHNICAL SKILLS

Languages: Python, R, SQL, Java, JavaScript, HTML
Machine Learning & Stats: XGBoost, Random Forests, glmnet, NLP, Markov Chains, Monte Carlo Methods
Tools & Libraries: pandas, ggplot2, Flask, Git, Salesforce, Apache, Stata, Excel

PROFESSIONAL EXPERIENCE

Associate Consultant | *Krahnborn, Madison, WI* July 2026 – Present

- Support Salesforce implementations for client organizations, configuring objects, page layouts, and user permissions to align the platform with client business processes.
- Developed custom Lightning Web Components in JavaScript and HTML to extend standard Salesforce functionality beyond what declarative configuration supports.
- Build and test declarative automations, reports, and dashboards, validating data across sandbox and production environments prior to release.
- Partner with consultants and client stakeholders to gather requirements and document solution designs for ongoing implementation work.

Data Science Research Assistant | *Niedenthal Emotions Lab, UW–Madison* Sept 2025 – Aug 2026

- Built automated data pipelines in R and Python to clean, organize, and aggregate raw experimental data from psychological studies, reducing manual processing time and improving reproducibility.
- Applied NLP and supervised machine learning to quantify sentiment in subject responses, mapping text to valence and arousal dimensions.
- Designed and administered behavioral studies end-to-end, from IRB-compliant protocol design to data collection, supporting multiple research projects.

PROJECTS

Reading Log Dashboard | *GitHub* *June 2026*

- Built a cross-platform Electron desktop app (React, Vite, Tailwind, Zustand) that transforms a group's Google Form reading log into interactive Competition, Analytics, and Spotify-Wrapped-style summary views.
- Engineered live data syncing from a published Google Sheet (or local CSV via PapaParse), parsing per-session reading data into GitHub-style heatmaps, ranked standings races, and cumulative trend charts with Recharts.

Pass Catcher CPOE Model | *GitHub* Sept – Oct 2025

- Built a Random Forest model using the ranger package to predict expected completion percentage (xCP) for NFL pass catchers, controlling for route type, defender positioning, and game situation.
- Derived completion percentage over expected (CPOE) to identify receivers consistently outperforming or underperforming their statistical baseline.

DelphiAI — Spotify Recommendation App | *GitHub* May – Sept 2024

- Developed a full-stack Flask web application integrating the Spotify OAuth API to surface personalized listening history, top artists, and track statistics.
- Incorporated the ChatGPT API to generate music recommendations based on user search queries and historical listening behavior.

CERTIFICATIONS

Salesforce Certified Platform Administrator | *Salesforce* Issued Aug 2026 – Valid through 2027
